## Loner MOBILE

BlackLine GPS provides the world's most effective mobile worker protection system. By integrating the GPS technology embedded within many BlackBerry smartphones with BlackLine's hosted Location Services Platform, LonerMobile is the easiest way to extend a sphere of protection to mobile workers.

LonerMobile provides multiple layers of protection to mobile workers and provides visibility of any safety breach through alerting.

- 1. MOBILE WORKER CHECK-IN:** LonerMobile's first layer of protection requires the mobile worker to respond to a periodic check-in request. If a worker fails to respond, the system notifies safety monitoring personnel.
- 2. GPS LOCATION REPORTING TO BLACKLINE'S LOCATION SERVICES PLATFORM:** In the event of an emergency, the mobile worker's last-reported location is quickly available.
- 3. PANIC NOTIFICATION:** LonerMobile offers a convenient hot-key for emergency notification to your monitoring staff.

### LAYERS OF SAFETY

### FEATURES

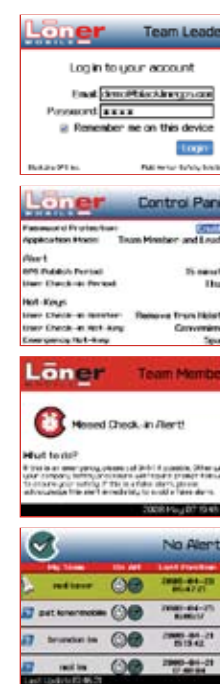

**EASY-TO-DEPLOY:** Easily installed requiring only a few minutes of configuration time per device.

**CONFIGURABLE:** BlackLine's LonerMobile application and Location Services Platform each provide a selection of targeted features with minimal configuration time.

**SAFETY ALERTING:** Alerts are communicated via text message, email, and a dedicated Web-based monitoring interface that features a real-time, visual and audible alerting system.

**THREE OPERATING MODES:** Team Member mode protects mobile workers. Team Leader mode provides a convenient mobile monitoring system. A hybrid mode provides Team Leaders a sphere of protection just like Team Members.

**CONTROL PANEL:** The LonerMobile application features password-control of device settings, including GPS reporting period, selection of hot-keys, and user check-in period.

## Loner GPS

BlackLine's LonerGPS dedicated device complements mobile worker safety, offering a deeper level of protection. Featuring motion detection technology, it notifies monitoring staff when a mobile worker is no longer moving. When operating in conjunction with a mobile phone, redundant communications and monitoring reduces point-of-failure risk.
